

Q1. Create a GitHub repository with name ABC-20092025

The screenshot shows a GitHub repository page for a user named 'deepat1128'. The repository is named 'ABC-20092025' and is public. The page displays the following information:

- Repository Name:** ABC-20092025
- Branch:** master (1 Branch)
- Files:** A list of files in the repository, including README.md, azurepipeline.yml, file1, gw.sh, main.tf, provider.tf, q3.txt, and variables.tf. Each file entry shows its name, type, and the time it was last committed.
- Commit History:** A table showing the commit history, including the commit message, the user who made the commit, and the time it was made.
- README:** The README file content, which includes the repository name 'ABC-20092025' and the text '4th evaluation'.
- Right Sidebar:** Contains sections for 'About' (4th evaluation), 'Releases' (No releases published), 'Packages' (No packages published), and 'Languages' (HCL 95.7%, Shell 4.3%).
